

Introducing the **Energy Analytics Workbench® - Delta**. Five years in the making, our reengineered user interface and back end has unleashed the most powerful and sophisticated pure oil & gas workflow available on the market today. For all its improvements, Delta is simple to use. Delta was designed by petroleum engineers and geologists - not software engineers. Delta is our boldest release to date.

From raw data to diagnostics, from analytics to prediction, type curves to economics, surveillance to reconnaissance and everything in between, you will be making faster decisions with higher confidence than ever before.

Energy Analytics Workbench

With our new **AQUEDUCT™** data connector, quickly build and test your type curves, normalize to different completion types and send the results from Delta directly to ARIES. AQUEDUCT™ is fully automated, requiring no manual intervention. Since Delta ports directly to your ARIES database – MS Access or SQL Server – you are instantly live with the analysis you made in our state of the art DCA module – simplifying and streamlining management and SEC reporting.

Type Curves - Oil (BOEPD)

Our clients asked for innovation in DCA and we delivered. Delta boasts our new DCA module has a total of ten (10) DCA methods:

1. Modified Arps (standard Secant and Tangent)
2. Exponential
3. Duong
4. Power Law Exponential
5. Stretched Exponential
6. Transient Hyperbolic
7. Logistic
8. NsegHyp2Exp
9. 2segHyp
10. **DCAScan™**

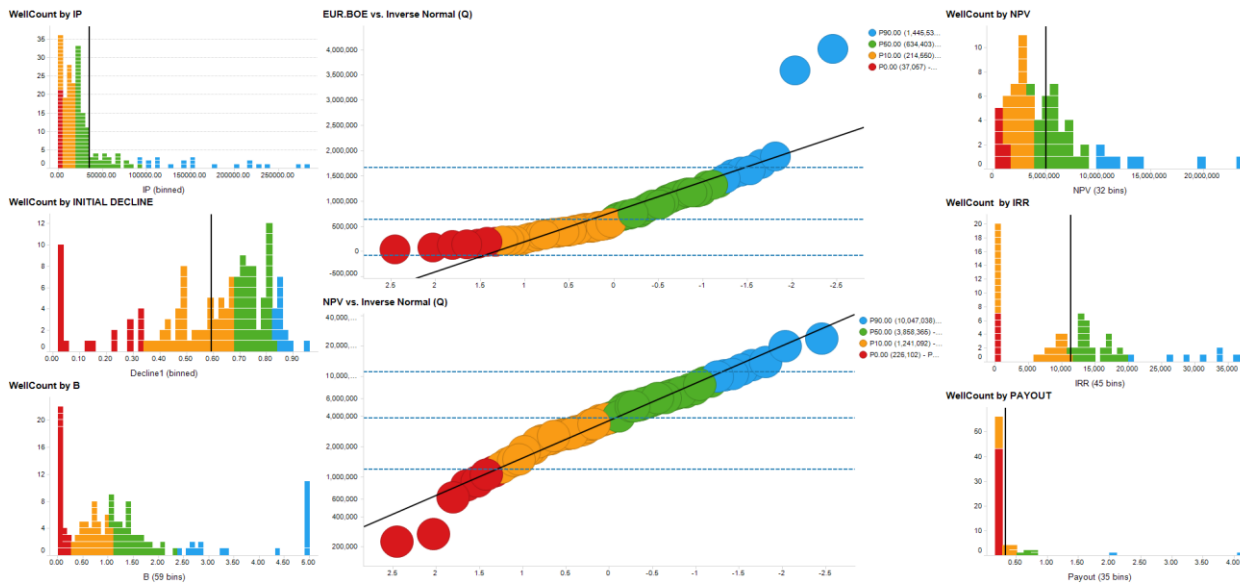

The tenth method, **DCAScan™**, is Blue River's new state-of-the-art stochastic method. DCAScan™ analyzes all possible combinations of DCA variables, scanning the entire parameter space - to ensure you glean the most insights from your data. Standard variable optimization is crude and only provides one flavor of the exact "solution." We engineered a tool for you that understands not just the "exact solution" but more impressively - the entire solution space.

Delta leverages all popular commercial data sets – IHS, Drilling Info, Oseberg – or leverage the tool with your own proprietary data.

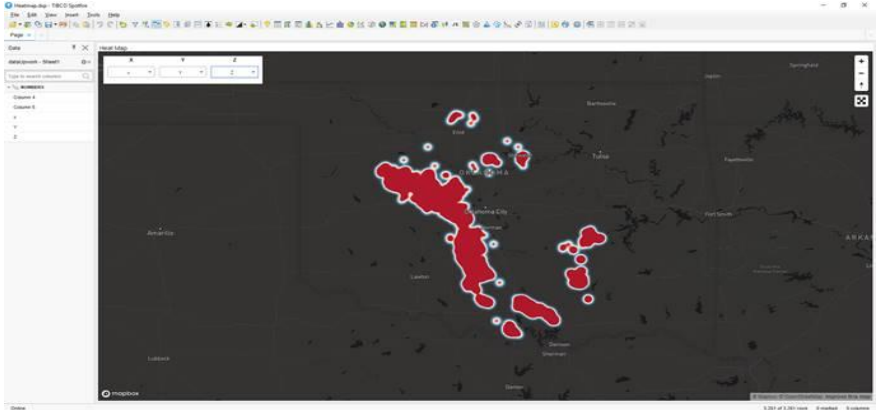

For engineers – Delta comes with all standard reservoir analyses - BHP calculators, PVT analysis, volumetric analysis, NGLs analysis and more.

EUR Distribution

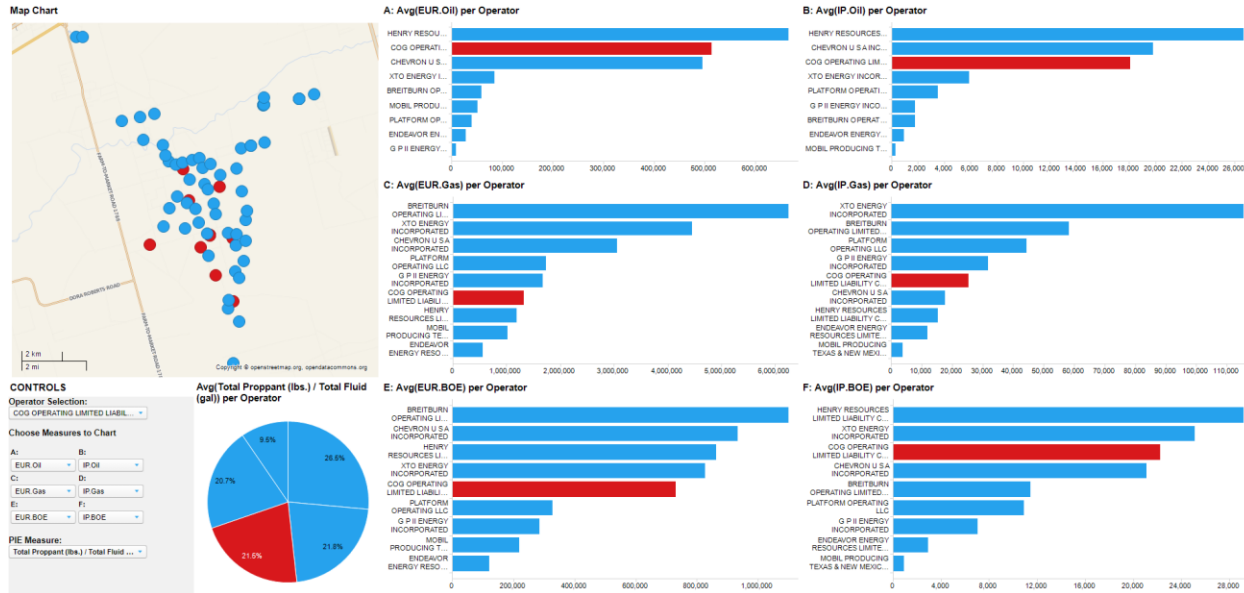

For geologists - Delta comes with an advanced interpolation module, ensuring you get the most from your data. All insights are displayed in our new state of the art spatial module.

Delta was engineered with you in mind, to answer your questions, immediately, before you waste precious time building adhoc models when only one, Delta, is needed. Delta is oil & gas analytics.
