

Data Sheet: Meeting Analytics

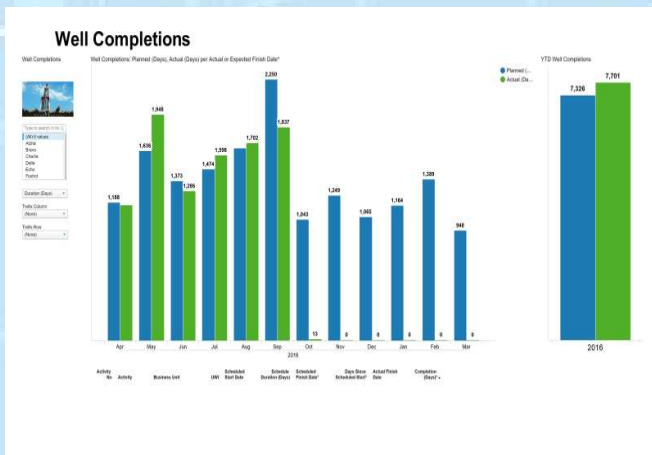

Blue River ANALYTICS

This “Purpose Driven” engagement is designed to get the most out of your important operational meetings. Most companies use MS PowerPoint, Word and Excel to drive their meetings. Using a static slide deck and some last minute, cobbled together spreadsheet, allows for only one thing - collecting a list of questions in the “parking lot” - only to be addressed at the next meeting. Result - another unproductive meeting.

Meeting Analytics is designed to take your PowerPoint, Excel and Word documents and transform them into actionable intelligence. How do we do it? Simple. Our team of expert Spotfire Advisors connect TIBCO Spotfire to all of your relevant databases and data sources - production, accounting, frac, reserves, completions, drilling and even spreadsheets - and pull in all pertinent data into a single project. With all of your data in a common location, easily recognize trends, patterns – good or bad – outliers and anomalies.

Easily monitor KPI’s such as total oil, gas & water production, average daily or monthly production, downtime, capital spend, rig and equipment, completions, workover management and whatever else is important in order for you and your team to make high confidence decisions.

Key benefits | Problems Solved:

- Quickly and easily analyze your production, cost, frac or any other relevant data.
- Utilize visualization and discovery techniques to quickly drill into areas of concern
- Immediately answer to your questions.
- Eliminate searches across multiple data sources – bring it all together in one place for cross-referencing and interrogation.
- Rapid return on investment. With all the information in one location and the ability to analyze production data, users can make quicker and smarter business decisions.
